VE, VF - 8 Link Arms!

\* Prevent binding - locking up \*  
Get Power to the Ground / Max. Traction . . .  
PROBLEM  
A. ARM ANGLES AT - 17,20,30,40,90 degrees  
B. OK soft, compliant OEM bushes but not for tauter/safer response, improving traction.  
C. Impossible to resolve till now. Firmer bushings cause binding/locking up of arms with more severe wheel tramp/loss of traction.  
SOLUTION  
K-MAC know how - Tauter response yet all positional, Self aligning, 2 axis bushes that also significantly extend load bearing area / wear life.
