FINALLY FRONT & REAR ONGOING

IMPROVE TRACTION & EDGE TIRE WEAR
Camber, Caster (and extraToe) Kits
AUDI TO VOLVO - Including Mercedes 'AMG', BMW 'M'

#502226K (Steel Rear Lower Arms)

W205 incl. AMG C43, C63/'S' (Sedan, Wagon)
W213, C253/X GLC, •Coil / 4MATIC•

* C63/S Coupe #502326-1K

•Airmatic models #502326K•

•AMG - W213 E53, 63/S. C253 GLC 43, 63/S #502326-1K

(THESE MODELS ARE FITTED WITH REAR LOWER ALLOY ARMS)

TOOLS REQUIRED

WRENCH: 2 x 18mm, 2 x 16mm

SOCKET: 1 x 18mm E, 1 x 18mm (Ext.), 1 x 12mm (Multi Spline)

Installation should be carried out by a qualified person

A Install with vehicle on 4 post hoist or car ramps to aid reconnection of inner bolts step K.

EXTRA TOE - UNBOLT ARMS

B Located FRONT of subframe.

After arm removal use bench vice and the '2' small tubes supplied to press out the inner adjustable Toe bush on each side. Press in the new KMAC bushes. (till "EVENLY" centered)

C Reconnect Toe arms using the new KMAC D shape bolts and cam washers supplied with the 'tab' lock washers under each nut

CAMBER - WITHOUT ARM REMOVAL

D Securely position jack under a lower control arm (towards inner end). For ease of bolt removal - Jack / raise arm only sufficient to take up / support load. Make sure also load is "EVEN" on both forks.

E REMOVE THE INNER BOLT initially quarter way re-adjust jack - (if not easy to tap out) - bolt head should be horizontal.

F Slowly lower jack - sufficient only for end of arm to expose the bush in frame. Then install the KMAC threaded rod tool FROM FRONT (as in Pic) and large washer on REAR to extract bush 18mm ext. socket (can be tight - use impact wrench if available).

G Clean hole and insert the new KMAC elastomer bushes. Now lubricate the steel inner bushes (only) with silicone grease supplied and insert.

H For ease of bolt entry preferably rotate bush 'D' holes to 6 o'clock position. (Flat then is to bottom).

i Connect steel plates (Front and Rear) so 'centrer step' is seated in slot as in Pic 2.

J Place tooth washers under head of bolt (then prior to tab lock washer and nut).

K Raise and reconnect arms (insert bolt with flat at bottom so lines up with 'D' hole flat)

WHEEL ALIGN WITH TIRES ON SLIDE PLATES

SIMPLY ROTATE BOLT HEADS - UNIQUE KMAC PATENTED SYSTEM
(allowing accurate adjustment "under load")

Make sure nuts are loose and rotate the bolt heads for both Camber and Toe. Camber bush rotate upwards. Once required settings obtained, hold head of bolts in this position and tighten the nuts to 110Nm (80ft/lbs)

Then fold one of the 3 lock Tabs that lines up with the side of a nut

ESSENTIAL RECHECK MAKE SURE 4 NUTS ARE FULLY TIGHT

(Loose Nuts Cause Noise Noticeable Camber Change)

FRONT - CAMBER & CASTER KIT ALSO MANUFACTURED

KMAC - ADJUSTMENT FOR THE 1st. TIME (Precise Single Wrench)

Tires are expensive - Resolve costly, premature edge tire wear-
Improve traction - Ongoing adjustment for curb knock damage,
altering height through load carrying or lowering, fitting wide
profile tires / wheels.

A REVOLUTION IN SIMPLIFIED ADJUSTMENT

BUSH ROTATES INSIDE (stationary) OUTER SLEEVE means unlike other
brands bushes can be inserted in any position! (not just one offset position
of adjustment) allowing therefore precise change of adjustment.
SIMPLY BY ROTATING BOLT HEADS.

KMAC UNIQUE PATENTED INTERLOCKING BOLT / BUSH DESIGN

GENUINE KMAC (Rear Camber with "extra" Toe adjustment)

1. Unlike upper Camber arms KMAC are designed to adjust lower arms.

Advantage is clearance top of tire to outer fender is maintained when
wanting to reduce inner edge tire wear. Essential if wide profile tires /
wheels fitted. Also KMAC kits include extra Toe adjustment to
compensate for the new Camber facility.

2. Unlike virtually all other brands — we do not use solid metal to
metal spherical bearings which transmit road noise, uncompromising
ride harshness and prematurely pound out. Instead patented design
long life elastomer bushings (with twice the load bearing of OEM
bushings) allowing also improved handling response.
